الدورة الشتوية / المستوى الثالث / الكتاب الجديد

إعداد: سائد دهيمش

DATE: SATURDAY, 14th JANUARY, 2017

TIME: 1 HOUR AND A HALF

Read the following text carefully, and then in your ANSWER BOOKLET answer all the questions that follow. Your answers should be based on the article.

Scientists have already developed brain implants that improve vision or allow disabled people to use their thoughts in order to control prosthetic limbs like arms, legs or hands, or operate a wheelchair. In 2012 CE, research on monkeys showed that a brain implant improved their decision-making abilities. How will humans benefit from this research? Scientists hope to develop a similar device to help people who have been affected by brain damage, which could be caused by dementia, a stroke or other brain injuries.

In 2010 CE, neuroscientists confirmed that it was possible to communicate with some patients in a coma, by using a special brain scanner called an MRI. They suggested that, in the future, more meaningful dialogue with patients in a coma would be possible. Two years later, it has finally happened. The scanner, used on a man who has been in a coma for more than twelve years, proves that he has a conscious, thinking mind – a fact that had previously been disputed by many. Doctors plan to use similar brain-scanning techniques in the future to find out whether patients are in pain, or what they would like to be done in order to improve their quality of life.

A new cancer drug is being trialled in Plymouth, UK, which doctors hope will extend the lives of cancer patients and reduce their symptoms overnight. It is taken as a single pill every morning, and so far patients have shown none of the usual side effects such as the sickness and hair loss that are experienced when undergoing other forms of cancer treatment. The new treatment works by blocking a protein which causes cancerous cells to grow. It will improve patients' life expectancy and quality of life much more quickly than any other treatment. The patients were interviewed a year after starting the treatment and are fit and well, saying that they are definitely going to continue the trial. They have every reason to believe the new drug is going to work. Doctors at Plymouth Hospital hope that it will help patients from all over the world.

Question Number One (20 points)

1. The writer suggests three kinds of limbs, write down two of them. (2 Points)
2. Find a word that describes “**an object that is manufactured by humans**”. (2 Points)
3. What does the underlined word “**their**” refer to? (1 Point)
4. Quote the sentence which shows that communication with patients in a coma would be possible in the future. (2 Points)
There are two main side effects of the other forms of cancer treatment. Write down these two side effects. (2 points)
5. Why doctors plan to use similar brain-scanning techniques in the future? (2 Points)
6. Why do you think cancer patients agreed to undergo new types of treatments? (2 Points)

7. The writer states that some diseases growth in the body, often causing death. Think of this statement; Mention two ways to help patients stopping the disease at early age. **(2 Points)**
8. “A new drug will help to treat certain types of cancer almost instantly”. How far do you think this is true? Give reasons. **(2 Points)**

B. Literature Spot: (3 points)

Read the following verses from ‘I remember, I remember’ by Thomas Hood’s poem and then answer the questions that follow:

The house where I was born,
 The little window where the sun
 Came peeping in at morn;
 He never came a wink too soon,
 Nor brought too long a day,
 But now, I often wish the night
 Had borne my breath away!

- 1. Why does the poet describe the sun as peeping in?**
- 2. What rhetorical device does the poet use to describe the sun?**
- 3. Quote the line which shows that the poet was happy?**

Question Number Two: (14 points)
