

المسألة الثالث :

$$\frac{1.0 \times 10^{-7}}{1.0 \times 10^{-2}} = \frac{[\text{H}_3\text{O}^+]}{[\text{OCl}^-] \cdot [\text{HOCl}]} = K_a \quad (1)$$

الاستاذة:
هالة حامد ابو صيف

$$\frac{1.0 \times 10^{-7}}{1.0 \times 10^{-2}} = \frac{1.0 \times 10^{-2}}{[\text{OCl}^-]} \quad (2)$$

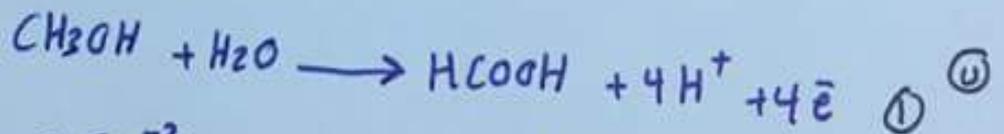

$$[\text{OCl}^-] = 1.0 \times 10^{-3} \text{ مول/لتر} \quad (3)$$

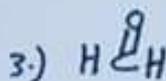

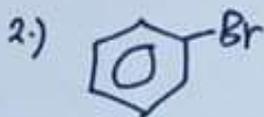

$$[\text{OCl}^-] = 1.0 \times 10^{-3} \text{ مول/لتر} \quad (4)$$

$$\frac{1.0 \times 10^{-2}}{2} = \frac{[\text{NaOH}]}{[\text{NaOH}] - [\text{HOCl}]} \cdot \frac{[\text{H}_3\text{O}^+]}{[\text{OCl}^-]} = K_a \quad (5)$$

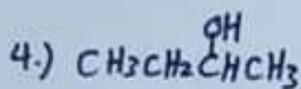

$$\frac{1.0 \times 10^{-2}}{2} = \frac{([\text{NaOH}] + [\text{OCl}^-]) \cdot [\text{H}_3\text{O}^+]}{[\text{NaOH}] - [\text{HOCl}]} = K_a$$

$$[\text{H}_3\text{O}^+] = \frac{1.0 \times 10^{-2} \times 0.5}{1.0} = 5.0 \times 10^{-3} \text{ مول/لتر}$$

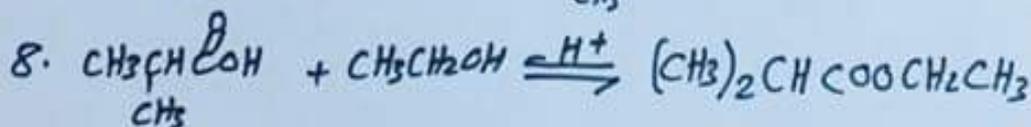

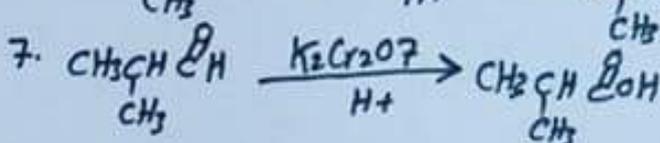

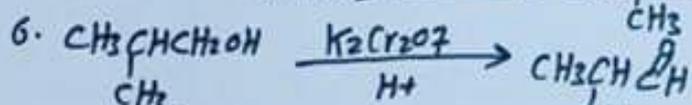

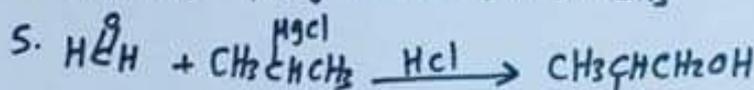

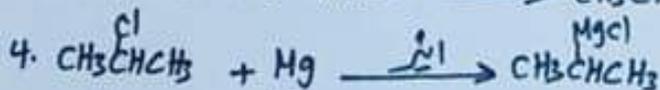

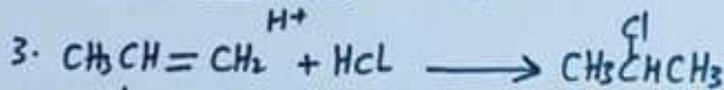

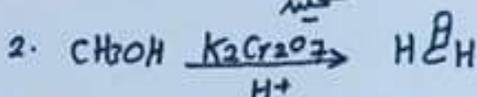

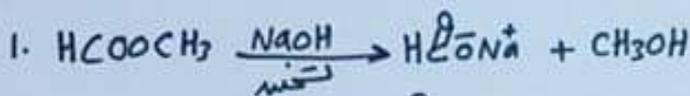

18

الاسم:
 د. محمد ابو هيف

باستخدام محلول تولتر $\text{Ag}(\text{NH}_3)_2^+ \text{OH}^-$

19

4 سيليلوز

5 الامليلوز

السؤال الثاني :

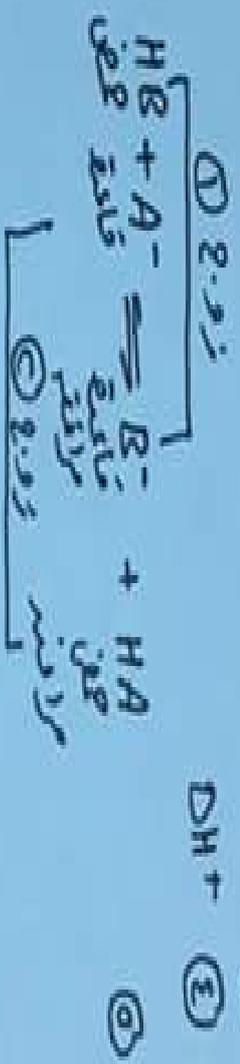

$$[A^-] \cdot x_1 = \frac{[HA] \cdot x_1}{K_a} = [OH^-]$$

الاستنتاج :
كلما اقل هيدروجين

$$\frac{[OH^-] \cdot [OH^-]}{[A^-] \cdot x_1} = K_b \quad (1) \quad (F)$$

$$\frac{[OH^-]}{[A^-] \cdot x_1} =$$

- (A) HA
- (B) C
- (C) DH+

$$[A^-] \cdot x_1 = \frac{[HA] \cdot [OH^-]}{[HA]} = K_a \quad (2) \quad (A)$$

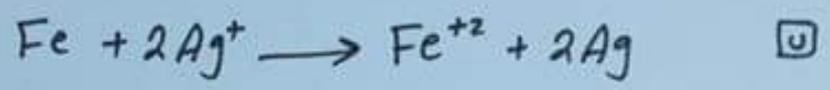

ع-ج-ب الخواص → (4) (C)

H₂O (5) (D)

السؤال الرابع:

- ١ X ٢-٣٧ ٣ Z^{+2} ٤ $٢,٧٢$ ٥ لا يمكنه
 ٦ $X \cdot Z$ ٧ X ٨ من X الى دعاء Z

الاستاذ :
 كعاد عاد ابوصديق

$E^{\circ} = 0.8 + 0.44$
 $= 1.24$ فولت

$n = 2$
 $1 \cdot 1 = \frac{1 \cdot X}{2 \cdot X} = \frac{[Fe^{+2}]}{[Ag^+]^2} = Q$

$Q = 1$

$E = E^{\circ} - \frac{0.059}{n} \log Q$
 $= 1.24 - \frac{0.059}{2} \log 1 = 1.24$ فولت

$= 1.24$ فولت
