

When you are using a computer, think about the technology that is needed for it to work. People have been using types of computers for thousands of years. A metal machine was found on the seabed in Greece that was more than 2,000 years old. It is believed that this was the first ever computer. In the 1940s, technology had developed enough for inventors to make the first generation of modern computers. One such model was so large that it needed a room that was 167 square metres to accommodate it. During that decade, scientists in England developed the first computer program. It took 25 minutes to complete one calculation. In 1958 CE, the computer chip was developed. In 1962 CE, the first computer game was produced, followed two years later by the computer mouse. In 1971 CE, the floppy disk was invented, which meant that information could be shared.

- 1- People have used computers for thousand of years ? Write down the evidence from the article ?
- 2- The writer mentioned that the first computers has two disadvantages ? Quote them ?
- 3- The first computer wasn't useful . Do you agree ? Write down your point of view ?
- 4- What did they invent between 1958 and 1971 ?
- 5- What do the underlined words refer to ?
- 6- Life will rely on computer a lot in the future , Is it a positive point ? Write down your point of view in two sentences ?

Correct the verbs :

- 1- By the time we did the project , We.....(start) a new project .
- 2- Tomorrow morning , She(study) Maths .
- 3- I(go) to the park yesterday .
- 4- When Ali(walk) daily , he(drink) water .
- 5- By this time tomorrow , We(travel) .
