

A. Read the following text carefully, and then in your ANSWER BOOKLET answer all the questions that follow. Your answers should be based on the text:

When you are using a computer, think about the technology that is needed for it to work. People have been using types of computers for thousands of years. The first ever computer was found on the seabed in Greece. The first generation of modern computer was so large and its programme took 25 minutes to complete one calculation.

Nowadays many Jordanians classrooms use a whiteboard as a computer screen. A consequence, teachers can show websites on the board in front of the class. Teachers can then use the Internet to show educational programmes, play educational games, recordings of languages, listening to music and so on.

Modern computers have cameras, so you can see the people you are talking to. In this way, students who are studying English in Jordan can see what students in England are doing in the classroom while they are speaking to them. You can also use this system to invite guest speakers to give talks over a computer.

In just a few years' time, experts say that billions of machines will be connected to each other and to the Internet. As a consequence, computers will increasingly run our lives for us. For example, your fridge will know when you need more milk and add it to your online shopping list; your windows will close if it is likely to rain; your watch will record your heart rate and email your doctor; and your sofa will tell you when you need to stand up and get some exercise!

Question Number One (20 points)

1. The author states two benefits of computers which have camera. Write them down.
