## **Question Two:**

# A) Read the following two text carefully, and then in your ANSWER BOOKLET answer all the questions that follow. Your answer should be based on the texts.

# Text A

Scientists have successfully invented a prosthetic hand with a sense of touch. It is an exciting new invention, which they plan to develop. It is possible that, in the not-too-distant future, similar artificial arms and legs will have taken the place of today's prosthetic limbs.

Dennis Sorensen, a 39-year-old from Denmark, was the first person to try out the new invention. After losing his left hand in an accident, he had been using a standard prosthetic hand for nine years. The new hand, which was developed by Swiss and Italian scientists, was a huge improvement .With <u>it</u>, Sorensen could not only pick up and manipulate objects, but he could also feel them. 'When I held an object, I could feel if it was soft or hard, round or square,' he explained. He said that the sensations were almost the same as the ones he felt with his other hand.

Unfortunately, Sorensen was only taking part in trials, and the equipment is not ready for general use yet. He was only allowed to wear it for a month, for safety reasons. So now he has his old artificial hand back. However, he hopes that soon he will be wearing the new type of hand again. He is looking forward to the time when similar artificial limbs are available for the thousands of people who need them. He will have helped to transform their lives.

- 1) Dennis Sorensen was able to do many things by wearing the new invented hand. Write down two of these things.
- 2) The article states that Sorensen has his old artificial hand back for two reasons. Write these two reasons down?
- 3) Find a word in the text which means, "an artificial body part".
- 4) Quote the sentence which states that the sensation with the new hand was nearly similar to normal human hand.
- 5) What does the underlined word "it" refer to?
- 6) It is said that wherever the art of medicine is loved, there is also a love of humanity. Think of this statement and, in two sentences, write down your point of view.

## Text B

Speaking a foreign language, it is claimed, improves the functionality of your brain in several different ways. Learning new vocabulary and grammar rules provide the brain with beneficial 'exercise', which improves memory. As well as exercising the brain, it is thought that learning a new language also presents the brain with unique challenges. These include recognizing different language systems and ways to communicate within these systems. These skills improve your chances of success in other problem-solving tasks as well. It is said that students who study foreign languages do better, on the whole, in general tests math's, reading and vocabulary than students who have only mastered their mother tongue.

According to a study carried out by Pennsylvania State University, USA, multilingual people are able to switch between two systems of speech, writing, and structure quite easily. It has been proved that they\_are also able to switch easily between completely different tasks. One experiment required participants to operate a driving simulator while carrying out separate tasks at the same time. The experiment showed that multilingual participants were less distracted by the other tasks and therefore made fewer driving errors.

- 1) Learning a foreign language helps the brain in two ways. Write these two ways down.
- 2) The text states that learning a foreign language presents the brain with two unique challenges. Write them down.
- **3**) The article provides two research findings about multilingual people. Write these two findings down.
- 4) Quote the sentence which states that learning a foreign language improves ability to multitask.
- 5) Find a word in the text which means "the first and the main language that you learnt when you were a child".
- 6) Nowadays, it is important to learn at least one foreign language. Suggest three possible ways that help individuals learn a foreign language.

## **B. literature Spot:**
