**Question One (26 points): Read the following article carefully, and then in your answer booklet, answer all the questions that follow. Your answer should be based on the article.**

When you are using a computer, think about the technology that is needed for it to work. People have been using types of computers for thousands of years. A metal machine was found on the seabed in Greece that was more than 2,000 years old. It is believed that **this** was the first ever computer.

In the 1940s, technology had developed enough for inventors to make the first generation of modern computers. One such model was so large that it needed a room that was 167 square metres to accommodate it. During that decade, scientists in England developed the first computer program. It took 25 minutes to complete one calculation. In 1958 CE, the computer chip was developed. The first computer game was produced in 1962 CE, followed two years later by the computer mouse. In 1971 CE, the floppy disk was invented, which meant that information could be shared between computers. The first PC (personal computer) was produced in 1974 CE, so people could buy computers to use at home.

In 1983 CE, people could buy a laptop for the first time. Then, in 1990 CE, the British scientist Tim Berners-Lee developed the World Wide Web. It was not until 2007 CE that the first smartphones appeared. Today, most people use their mobile phones every day. What will happen in the future? You can already buy watches which can do the same as mobile phones. Scientists have also developed glasses that are capable of doing even more than this.

Life in the future is going to see further changes in computer technology. It is likely that all aspects of everyday life will rely on a computer program, from how we travel to how our homes are heated.

1. Different inventions were completed between 1958CE – 1964CE. Write down two of these inventions. **(4 points)**
2. The writer specifies two aspects of everyday life that will depend on technology in the future. List two of them. **(4 points)**
3. Quote the sentence which shows the impact of inventing the floppy disk. **(3 points)**
4. Find a word in the text which means “a small piece inside a computer which stores information via an electric current.” **(3 points)**
